

Mini Rack Systems

- ◆ Available with 2 or 3 filter housings
- ◆ Available without filter housings
- ◆ Optional stand for free-standing installations
- ◆ Nominal 10 to 16 GPM flow rates at 30mj UV dose
- ◆ 3/4" porting on 10GPM model
- ◆ 1" porting on 16GPM model

UVDynamics Mini-Rack Systems combine up to three Big Blue style filter housings and a UV disinfection system into one simple, clean looking, and integrated product line. The Mini-Rack system has an available optional floor stand to simplify installation where wall mounting is impracticable. The Mini rack is manufactured from rugged 10 gauge HR commercial grade steel and finished in a tough powder coat finish which will keep the system looking good as new for many years.

The Mini-Rack system uses a special variation of our standard disinfection chambers to allow for the interconnect plumbing to be hidden from view, adding to the neat appearance of the system. The UV disinfection chamber is equipped with a bottom mounted 1/4" drain plug to facilitate winterization in seasonal applications. UVDynamics Mini-Rack systems speed installation, are easy to service and provide lasting value.
